At First Mills, sustainability is embedded in how we grow, operate, and create long-term value.

4

Our Sustainability Approach

Sustaining progress through responsible growth

At First Mills, sustainability is embedded in how we grow, operate, and create long-term value. As a company positioned at the heart of the Kingdom's food system, our performance is inseparable from the health of natural resources, the strength of communities, and the integrity of the systems that support responsible production. Through disciplined management, measurable targets, and continuous improvement, we are strengthening resilience across our operations while contributing to national priorities and the broader transition toward a more sustainable and inclusive future.

At First Mills, sustainability begins with a fundamental understanding of our role in the Kingdom's food system. As a leading milling and food company, we operate at the heart of national priorities related to food security, nutrition, and economic development. Our responsibility extends beyond delivering products. It includes safeguarding resources, strengthening communities, and operating with integrity.

Our approach is structured around three core pillars that reflect where we have the greatest impact: protecting the natural environment, creating social value, and upholding responsible governance. These pillars provide a focused framework that aligns our operations with Saudi Vision 2030 and relevant international standards. They guide how we allocate resources, measure performance, and shape long-term strategy.

Sustainability is embedded directly into our operating model. Environmentally, we focus on improving energy efficiency, reducing emissions, managing water responsibly, advancing sustainable packaging, and strengthening circular economy

practices. We maximize the value of by-products, minimize waste, and continuously improve operational efficiency across our sites. Socially, we prioritize food quality and safety, nutrition and health, workforce development, and community engagement. Initiatives such as bakery training programs and targeted food donations reflect our commitment to building capability and supporting local communities. Strong governance frameworks, ISO-certified management systems, and clearly defined accountability structures ensure these priorities are implemented consistently and in full compliance with regulatory requirements.

We are also strengthening our focus on data, measurement, and transparency. Enhancing ESG reporting, refining key performance indicators, and embedding environmental and social targets into business planning are central to this effort. Through closer collaboration with suppliers, customers, employees, and community partners, we are working to generate measurable outcomes that reinforce resilience, promote responsible resource use, and create sustained value over the long term.

Our Sustainability Strategy

Our sustainability strategy is built on a robust framework that connects our long-term ambitions with everyday operational decisions. We recognize that sustainable performance must be intentional, structured, and embedded into how we run the business.

We organize our strategy around three core pillars that address our most material impacts: protecting the natural environment, driving positive social outcomes, and upholding responsible governance. These pillars shape our priorities, guide our investments, and inform how we measure progress across the organization.

Our strategic framework translates these pillars into defined action areas and enabling capabilities. By linking environmental and social objectives to measurable targets, governance oversight, and clear accountability, we create a structured pathway for progress. This approach aligns our efforts with national priorities and evolving global

standards, while reinforcing our commitment to responsible growth and long-term value creation. For further information on our strategy, please refer to the 2025 Sustainability Report that will be available on our website at www.firstmills.com/en/sustainability.php

Strategic Framework

Our Material Topics

Our sustainability efforts are focused on the issues that matter most to our business and Stakeholders. To guide this approach, we conducted a comprehensive materiality assessment aligned with international standards. This process identified and prioritized the ESG topics that have the greatest relevance to our operations, our Stakeholders, and our long-term performance.

Materiality Matrix

The materiality assessment resulted in 16 material topics, grouped across our three ESG pillars. These topics are presented within our materiality matrix, which reflects their relative importance based on both impact and financial materiality. By applying the principle of double materiality, we evaluate not only how our activities affect the environment and society, but also how sustainability-related risks and opportunities influence our financial performance.

A structured three-level evaluation scale was used to assess and rank each topic, providing a clear and consistent basis for prioritization. This framework enables us to focus resources where they matter most, strengthen risk management, and ensure that our sustainability strategy addresses the issues that are most critical to First Mills and our Stakeholders.

Priority 01	Most important 1 Food quality and safety 2 Climate change and energy management 3 Sustainable packaging 4 Talent management and development 5 Occupational health and safety	UNSDGs 2, 12, 13, 8, 4, 8	Vision 2030 - A vibrant society - A thriving economy - An ambitious nation
Priority 02	Very important 6 Nutrition and health 7 Water management 8 Business ethics and human rights 9 Waste management and circular economy 10 Responsible sourcing 11 Corporate governance 12 Community support	UNSDGs 2, 3, 6, 12, 13, 10, 16, 8	Vision 2030 - A vibrant society - A thriving economy - An ambitious nation
Priority 03	Important 13 Diversity, equity and Inclusion 14 Nationalization 15 Sustainable agriculture 16 Customer satisfaction and responsible labeling	UNSDGs 4, 5, 10, 16, 7, 15, 3, 12	Vision 2030 - A vibrant society - A thriving economy - An ambitious nation

Alignment with National and Global Imperatives

Our sustainability priorities are shaped by both national development goals and global frameworks that guide responsible economic and social progress. We recognize that long-term business resilience is closely linked to broader efforts to strengthen communities, protect natural resources, and support inclusive growth.

In 2015, the United Nations General Assembly established the 17 Sustainable Development Goals (SDGs) as part of the 2030 Agenda for Sustainable Development. These goals provide a global framework for addressing key challenges, including poverty reduction, environmental protection, and the promotion of prosperity and well-being.

While we are currently progressing toward a formal mapping of our sustainability programs against these goals, our initiatives already contribute to several priority areas aligned with the SDGs. This alignment reflects our commitment to operating responsibly within both national priorities and the broader global sustainability agenda.

UN SDG

Our Contribution

End hunger, achieve food security and improved nutrition, and promote sustainable agriculture

- Produce high-quality, nutrient-rich flour (including whole wheat and gluten-free) to support balanced diets and prevent malnutrition
- Source high-quality grains from responsible suppliers and, where feasible, increase local grain procurement to strengthen domestic agriculture and food security
- Implement strict quality control and efficient storage/distribution to minimize food loss and reduce food waste
- Repurpose by-products, such as bran, for animal feed to maximize resource use
- Support the community with targeted product donations and partnerships with charities
- Partner with research institutions to explore innovative farming techniques that strengthen local durum wheat practices

Achieve gender equality and empower all women and girls

- Design bakery and vocational programs that are accessible to women and men, expanding opportunities in food and hospitality
- Collaborate with women-focused social development associations so community investments also empower women and girls

Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

- Support and develop vocational and technical skills programs that help participants meet market needs and start their own businesses
- Strengthen entrepreneurship through initiatives such as the Saudi Bakery program for chefs and small bakers
- Create quality employment opportunities within milling operations and support functions
- Educate employees on sustainability and energy-saving practices that enhance workplace efficiency and resilience

Maintaining sustainable consumption and production patterns

- Support, develop, and promote initiatives to reduce waste across operations, the supply chain, and the community, with a focus on food waste
- Implement efficient inventory, storage, and distribution management to limit product losses
- Promote the 3 Rs (Reduce, Reuse, Recycle), including pallet reuse and by-product utilization
- Advance sustainable packaging through the evaluation and gradual adoption of biodegradable and resealable materials
- Improve sustainability reporting to track progress, enhance transparency and guide responsible production decisions

Climate action

- Invest in energy-efficient technologies, including upgraded milling equipment and low-carbon pest-control solutions, such as heat treatment
- Reduce greenhouse gas (GHG) emissions by optimizing logistics and lowering trip numbers
- Explore and prepare for solar energy and other renewable sources to power operations
- Raise awareness about climate action and energy conservation through employee and community programs
- Strengthen sustainability reporting and KPI dashboards to monitor progress toward emissions-reduction goals

Conserve and sustainably use the oceans, seas, and marine resources

- Transition toward biodegradable and reusable packaging and distribution mechanisms to reduce waste that could reach marine environments
- Encourage bulk purchasing and reuse of items such as pallets to limit single-use packaging
- Promote waste-reduction and recycling practices that lower the risk of packaging leakage into waterways and seas

Protect, restore, and promote sustainable use of terrestrial ecosystems, sustainably manage forests

- Support sustainable agriculture by partnering with research institutions on improved farming techniques for local durum wheat
- Increase responsible and, where feasible, local grain procurement to support long-term soil and land health
- Reduce chemical use through more sustainable pest-control technologies
- Raise employee awareness about water conservation and responsible resource use
- Maintain a commitment to sustainability reporting that tracks progress on responsible land and ecosystem management

Protecting our Nature

Responsible stewardship of the natural environment

Our approach to safeguarding the natural environment reflects the realities of operating in Saudi Arabia, where water scarcity, dust, and high energy demand, require careful and responsible resource management. In response, we focus on a defined set of priorities that address our most significant environmental impacts: climate and energy, sustainable packaging, water stewardship, waste and circular economy practices, and sustainable agriculture. These areas have been identified as material to our operations and are supported by defined targets and performance indicators that are embedded into planning, investment decisions, and operational oversight across all our sites.

Environmental management is integrated into our daily operations through structured processes, clear accountability, and a strong emphasis on prevention and continuous improvement. We work to use energy and materials more efficiently, reduce emissions and waste, and manage water and raw material inputs responsibly, while maintaining the highest standards of product quality and safety.

By strengthening environmental data systems, governance frameworks, and internal capabilities, we aim to progressively reduce our environmental footprint and support the long-term resilience of the ecosystems and communities in which we operate.

Climate Change and Energy Management

At First Mills, addressing climate change is an integral part of how we operate and plan for the future. We recognize the urgency of managing climate-related risks and opportunities, and we integrate sustainable energy practices directly into our operational and investment decisions. Our approach focuses on improving energy efficiency, reducing emissions, and strengthening climate resilience across our facilities.

Climate Change

We incorporate environmental risk considerations into operational planning, preventive maintenance, and site-level performance reviews. Establishing our 2024 GHG baseline provided greater visibility into energy- and emissions-intensive processes, allowing us to prioritize actions with the highest potential impact. Emissions performance is increasingly monitored on an intensity basis, measured per ton of production, ensuring that efficiency improvements keep pace with capacity growth.

Operational transparency plays a key role in managing energy use. Digital monitoring tools such as AdVActory provide real-time process visibility, helping reduce energy losses associated with rework, product loss, and stop-start operations. We have also expanded the use of heat treatment as a chemical-free pest control method, reducing emissions related to fumigation while improving resource efficiency and workplace safety. Packaging specifications are continuously reviewed and optimized to reduce material use where food safety requirements permit, contributing to lower upstream emissions and supporting circular economy objectives.

Our environmental management system remains certified to ISO 14001, reflecting a structured approach to managing environmental performance and embedding climate considerations into governance, risk management, and daily operations.

Approaches and Initiatives

During 2025, we used our 2024 emissions baseline to guide targeted Scope 1 and Scope 2 reduction initiatives, with a particular focus on energy-intensive processes and new capacity additions. Energy-efficiency measures across our mills included power factor optimization, lighting upgrades, and electrical system improvements, supported by AdVActory to strengthen process stability and detect abnormal energy use. We also expanded heat treatment as a chemical free pest control solution and advanced our renewable energy transition by commissioning energy audits and entering into a solar power contract for our Tabuk and Al-Ahsa sites.

Protecting our Nature continued

Energy Management

At First Mills, energy management is a core element of our climate and resource-efficiency agenda. We focus on improving energy productivity and reducing our environmental footprint while maintaining reliable, high-quality production across all facilities.

Optimizing Energy Consumption across our Facilities

We continued optimizing energy consumption across our operations during the year, through a combination of technology deployment, operational discipline, and infrastructure improvements. The expanded roll-out of AdVActory strengthened real-time monitoring of operational and quality parameters, enabling earlier detection of inefficiencies that can lead to unnecessary energy use. This enhanced visibility supports faster corrective action and more stable, efficient production.

We further refined our power factor optimization programs, with most mills achieving power factors

above 95%, reducing reactive power losses and associated utility penalties. Energy-efficient LED lighting with motion sensors continued to be installed across production and warehouse areas, lowering baseline electricity consumption. Preventive maintenance programs were also strengthened to ensure that motors, drives, fans, and other energy-intensive equipment operate at peak performance.

In addition, we commissioned an energy-efficient cooling warehouse designed to minimize electricity demand per pallet stored. This facility supports our broader energy-efficiency objectives while reinforcing our commitment to continuous improvement in operational performance and resource management.

Case Study

Powering Efficiency and Eliminating Chemicals

We operate in an energy-intensive industry where electricity costs, grid exposure, and rising ESG expectations require continuous improvement. At the same time, conventional chemical fumigation created production interruptions, safety considerations, and increasing regulatory pressure. These factors highlighted a clear opportunity to stabilize energy use, reduce emissions, and modernize pest control while protecting product quality and operational continuity.

“

By reducing pest-control downtime by more than 50% and contracting a 9 MW solar project, we are strengthening efficiency, safety, and long-term energy resilience across our operations.

A dual transformation in energy and operations

We implemented an integrated solution combining renewable energy transition and chemical-free pest control. A 9 MW solar power project was contracted with Safeer for our Tabuk and Al-Ahsa facilities, establishing a pathway to lower Scope 2 emissions and strengthen long-term energy resilience. In parallel, we deployed Saudi Arabia's first chemical-free heat treatment pest-control system in an industrial flour milling environment, replacing phosphine fumigation with controlled thermal treatment. Both initiatives were embedded into standard operating practices to support long-term scalability.

Measurable gains in performance and sustainability

In 2025, operational efficiency and environmental performance improved significantly. Heat treatment reduced pest-control downtime by more than 50%, improving production availability and eliminating chemical residues in treated areas. Power-factor optimization to above 95%, LED lighting, upgraded electrical systems, and improved process monitoring strengthened overall energy performance. In parallel, solar infrastructure advanced toward implementation starting in Q1 2026, with renewable supply expected to begin in the second half of 2026. Together, these actions enhanced safety, reduced emissions intensity, and reinforced operational resilience.

Protecting our Nature continued

Sustainable Packaging

Sustainable packaging is an important part of our environmental stewardship and our commitment to advancing circular economy principles. We aim to reduce the environmental impact of packaging across the product lifecycle while maintaining the highest standards of product safety, quality, and shelf life. Paper remains the primary material used for most of our retail packaging, offering a lower environmental footprint compared with many plastic alternatives.

Progress and Achievements

During 2025, we continued refining our packaging approach with a strong focus on material efficiency and circularity. Packaging specifications were reviewed and optimized to reduce material use wherever product safety and shelf-life requirements allow, lowering the volume of packaging per ton of product. We maintained a strong reliance on paper-based solutions for retail formats and began assessing opportunities to introduce biodegradable and recyclable materials across both consumer and B2B packaging.

We also identified post-consumer paper packaging waste as a key area for improvement and initiated efforts to enhance recycling and reuse practices. This includes exploring collaboration opportunities with downstream partners, regulators, and customers to support more effective material recovery and reuse, aligned with our broader transition toward a circular economy.

Waste Management and the Circular Economy

We are committed to advancing sustainable practices through effective waste management and circular economy principles. Our environmental management system requires systematic identification of environmental aspects associated with waste generation, including packaging, production losses, dust and maintenance-related waste.

Our Product Life Cycle

We carefully consider environmental impacts across the life cycle of our products, from sourcing raw materials to end-of-life management. Our focus is on optimizing resource use, improving efficiency, and reducing waste where feasible through measures such as:

Raw material sourcing

Considering responsible agricultural sourcing and material efficiency

Distribution and logistics

Using bulk loading and reusable packaging where possible to reduce single-use packaging

Production and packaging

Optimizing process yields, reducing packaging material and using nitrogen-filling technology to extend product shelf life and reduce food waste

Usage and consumption

Providing safe, high-quality products that support efficient use and minimize waste

End-of-life management

Supporting circular practices through recycling, reuse of materials (such as wooden pallets and scrap metal) and exploring biodegradable options

Minimizing Waste Across our Operations

Minimizing waste is a core part of how we manage environmental performance across our operations. We work to reduce material loss, improve resource efficiency, and strengthen circular practices throughout our production and logistics activities.

In 2025, we enhanced oversight of waste management by clarifying responsibilities at the site level, particularly for factory managers, and strengthening training programs focused on material efficiency and environmental awareness. These measures supported more consistent waste monitoring and handling across our facilities.

We also addressed key operational waste streams, including pallets, packaging materials, and scrap metals. Wooden pallets are reused wherever possible, extending their lifecycle and reducing material consumption. Scrap metal generated from operations is recovered and repurposed for equipment maintenance, reducing reliance on virgin materials and reinforcing circularity within our processes.

Protecting our Nature continued

Water Management

Responsible water use is a key priority for First Mills, reflecting both operational efficiency goals and the importance of supporting water resilience in the regions where we operate. We work to optimize consumption, reduce freshwater demand, and expand reuse wherever it is safe and feasible.

Our Al-Ahsa and Al-Qassim plants operate sewage water treatment facilities with a combined capacity of 200 cubic meters. Treated wastewater is stored and reused for irrigating landscaped areas and green roadsides, helping reduce reliance on freshwater resources and lowering the environmental impact of our operations.

In 2025, we strengthened our water stewardship approach by initiating site-level water mapping and identifying gaps in sub-metering to better

understand how water is sourced, used, and discharged across our facilities. These efforts will support the development of targeted reduction goals based on water use per ton of production and enable more precise monitoring of efficiency improvements and reuse initiatives. Ongoing initiatives focus on reducing water intensity through improved operational practices, enhanced housekeeping measures, and expanded safe reuse where appropriate.

Sustainable Agriculture

We support sustainable agriculture through our feed operations and our commitment to responsible sourcing. By providing nutritionally balanced, energy-efficient feed solutions, we help farmers improve productivity while reducing the need to transport animals to distant grazing areas.

This reduces pressure on vegetation and helps limit land degradation, supporting more sustainable livestock management practices in alignment with the Ministry of Environment, Water and Agriculture's objectives to preserve natural resources.

In 2025, we further formalized our approach to sustainable agriculture by linking operational efficiency, energy management, and resource

stewardship with broader national sustainability initiatives, including the Saudi Green Initiative. The continued integration of innovative technologies across our operations, such as heat treatment, planned solar energy adoption, and enhanced water management systems, supports a more efficient and responsible production environment. These efforts contribute to long-term agricultural resilience while reinforcing our role in supporting sustainable food systems.

For more detailed information on our environmental management, including full year-on-year data, calculation methodologies and site-level performance indicators for energy, emissions, water, waste, packaging, and sustainable agriculture, please refer to the 2025 Sustainability Report that will be available on our website at <https://www.firstmills.com/en/sustainability.php>

Looking Ahead

Across First Mills, we will remain focused on strengthening the integration between energy efficiency, renewable energy, and water stewardship to create a more resilient and resource-efficient operating model. We plan to build further on our heat treatment technology to enhance energy performance while maintaining robust pest control standards, and to connect these efficiencies with solar energy deployment and improved water management across our sites.

A key priority is completing a comprehensive energy and GHG baseline for all facilities and implementing a unified monthly KPI dashboard to enhance visibility, accountability, and performance tracking. This will enable more informed decision-making and robust oversight of progress against our environmental objectives.

Operationally, we aim to sustain a power factor of at least 95% across our mills and continue reducing

electricity consumption per ton of output. Planned measures include further lighting upgrades, motion sensor expansion, leak reduction, and motor optimization. We will also complete site-level water mapping and sub-metering to support reductions in water intensity through improved housekeeping and expanded safe reuse practices.

Over the coming years, we intend to increase the share of renewable energy in our overall energy mix as solar projects are implemented, deepen circular economy practices in waste and packaging, and explore opportunities to strengthen collaboration with farmers and partners to advance sustainable agriculture initiatives. In the longer term, our objective is to deliver structured sustainability targets that support low-carbon, resource-efficient operations, reduce reliance on non-renewable energy sources, and enhance resilience across our value chain.

Driving Social Change

Our People

Empowering people and enabling performance

Our people are the foundation of our long-term performance and resilience. We invest in workforce development not simply to strengthen internal capability, but to help shape national talent, support social progress, and contribute to the Kingdom's economic and food system priorities. By building skills, strengthening well-being, and fostering a safe and inclusive working environment, we are creating the conditions for sustained operational excellence while supporting broader societal development. This integrated approach positions human capital as a strategic driver of growth, innovation, and long-term value creation across First Mills.

Talent management and development

We advanced our talent agenda this year through a structured, forward-looking Human Capital strategy focused on closing critical skill gaps and strengthening long-term organizational resilience. A comprehensive leadership development program was implemented across executive, managerial, and supervisory levels, with an emphasis on effective decision-making, people leadership, and values-driven management. This was reinforced by a formal succession planning framework that identifies high-potential employees for key roles and prepares them through targeted development plans, mentoring, and coaching.

Continuous learning remains central to how we build capability across the organization. During the year, we expanded internal and external training programs covering technical, behavioral, compliance, and safety topics, while increasingly using digital and AI-enabled learning tools to personalize development pathways and enhance learning analytics. This approach enables us to align training more closely with identified skill gaps and evolving workforce needs. Programs are delivered through a combination of internal expertise and external partnerships, supported by structured mentoring and coaching to strengthen knowledge transfer and career progression.

We also maintained a disciplined approach to workforce composition, limiting reliance on non-employee workers to short-term or highly specialized requirements while core operations continue to be driven by a stable internal workforce. Recruitment and onboarding processes were further strengthened through psychometric assessments that evaluate both technical capability and cultural alignment, supporting consistently low turnover and high levels of employee engagement.

Development Program – Grow Together (2025)

In 2025, we implemented a comprehensive development initiative titled the “Development Program – Grow Together”. The program was structured into four modules, with one module delivered each quarter.

The initiative covered the entire company, including all plants, and was designed to ensure organization-wide participation and alignment. It also included the engagement of C-suite executives, reinforcing leadership commitment to continuous development. In total, the program delivered over 7200 training hours throughout the year, reflecting our strong focus on employee growth, capability building, and fostering a unified culture of collaboration and performance excellence.

Workforce Development

We are committed to developing our people, supporting our communities, and contributing to economic development and food security across the Kingdom of Saudi Arabia. Our workforce development approach is holistic and closely aligned with Vision 2030, with a strong focus on initiatives that deliver meaningful social value through education, capability-building, and skills development programs that benefit both employees and the wider community. We also play an active role in supporting local entrepreneurship and national talent development, helping to strengthen the broader labor market in which we operate.

We aim to strengthen our position as an employer of choice in the food manufacturing sector, recognized for a strong safety culture, structured professional development, and a supportive working environment. In 2025, this commitment was reflected in the rollout of an organization-wide leadership development program and continued enhancements to core HR processes and systems, designed to improve recruitment, onboarding, performance management, and career progression.

For more details and specific metrics on training, safety programs, and people development performance, please refer to the Sustainability Report published on our website at www.firstmills.com/en/sustainability.php

Turnover and Retention

We monitor turnover and retention as key indicators of workforce stability and organizational health. In 2025, we maintained an exceptionally low turnover rate, well below typical industry benchmarks, reflecting the strength of our work environment, competitive reward structure, clear career pathways, and strong cultural alignment.

Our recruitment process includes psychometric assessments to evaluate both technical capability and alignment with our values and behavioral expectations. This approach supports long-term cohesion, strengthens team performance, and contributes to sustained employee engagement and retention across the organization.

Turnover and Retention Performance

Regular engagement surveys, performance dialogues and open communication channels help management identify and address emerging issues early, contributing to sustained retention levels and reinforcing our position as an employer of choice.

Driving Social Change continued

Diversity, Equity, and Inclusion

We are committed to maintaining a diverse, equitable, and inclusive workplace where hiring and promotion decisions are guided by merit, capability, and performance. In 2025, we reinforced a capability-driven recruitment approach focused on attracting the best talent regardless of gender or background, while continuing to support national priorities to develop Saudi talent across all levels of the organization.

Our equal opportunity, anti-discrimination, and ethical conduct policies remain firmly embedded in day-to-day operations. These are supported by confidential reporting channels and a non-

retaliation framework that encourages employees to raise concerns with confidence. No incidents of discrimination were recorded during the year, reflecting the effectiveness of preventive measures and the emphasis placed on fairness and respect across all areas of the business. Structured career pathways, transparent mobility, and clearly defined internal promotion processes further support equitable treatment and professional growth, helping ensure that opportunity and advancement remain accessible to all employees.

Our Workforce

	2024			2025		
	Saudi Employees	Non-Saudi Employees	Total	Saudi Employees	Non-Saudi Employees	Total
Head Office Total	49	19	68	53	20	73
Jeddah Plant*	62	164	226	59	145	204

Gender ratio

Nationalization

We are fully committed to supporting Saudization initiatives led by the Ministry of Human Resources and Social Development (HRSD) and have developed a strategy to empower Saudi talent within the food and feed industries. Our approach focuses on creating meaningful employment opportunities, designing specialized training programs, and fostering a work environment that supports long-term career growth for Saudi nationals.

We collaborate closely with government entities and educational institutions and partner with HRSD through programs such as Tamheer and platforms including Doroob. These partnerships enable structured training pathways that enhance skills development and contribute to higher

nationalization rates across our operations. In addition, we have established internal Saudization objectives for specific administrative and operational roles to promote balanced national representation across job levels. We actively engage with universities and technical colleges throughout the Kingdom to build strategic relationships and attract qualified graduates and technicians. Through job fairs, career days, internships, and structured training programs, we help young Saudi nationals develop the knowledge, skills, and practical experience needed to transition successfully into the workforce and contribute to the Kingdom's economic development.

Saudization in 2025

	Nitaqat Category 2024	Saudization 2024	Nitaqat Category 2025	Saudization 2025
Head Office	Platinum	42%	Platinum	50%
Plants	High Green	37%	High Green	38%
Average Saudization Percentage	High Green	39.5%	High Green	43.7%

Driving Social Change continued

Occupational Health and Safety

We place the health and safety of our employees, contractors, and visitors at the center of our operations. Our Environmental, Health, and Safety (EHS) management system is certified to ISO 45001:2018 and is supported by structured inspections, regular audits, and ongoing training and awareness programs. Health and safety expectations are communicated from day one through comprehensive induction programs, toolbox talks, targeted campaigns, and continuous communication to ensure clarity and accountability across all sites.

In 2025, we continued strengthening our safety culture through structured EHS training, close monitoring of safe operating hours, and reinforced reporting mechanisms that enable employees to raise concerns confidently and without fear of retaliation. Health and safety governance is supported by joint management-worker engagement structures and full alignment with Saudi regulatory requirements and international standards. Further details on our operational controls and performance are presented in the Operations section of this report.

For more details and specific metrics on occupational health and safety training, safe operating hours, and incident performance, please refer to the the 2025 Sustainability Report published on our website at <https://www.firstmills.com/en/sustainability.php>

Occupational Health and Safety in 2025

Training

	2024	2025
Training sessions	68	11
Training hours	37	272
Safe operating hours	1,440,000	1,200,728

Incidents and Accidents

	2024	2025
Minor incidents	9	6
Major quality incidents	0	0

Well-being and Employee Experience

We operate in a rapidly evolving social landscape, where awareness of health, nutrition, and work-life balance continues to grow, and expectations for corporate support of employee well-being are increasing. In response, we place strong emphasis on employee well-being through a holistic, people-centered approach designed to support both personal and professional resilience.

Throughout 2025, we expanded our Employee Assistance Program to provide confidential emotional, psychological, and social support, complemented by preferential healthcare and financial planning services offered through trusted external partners and local banks. Several well-being initiatives were also extended to employees' families, reflecting our belief that household stability plays an important role in overall well-being and performance. These enhancements built on earlier efforts in 2025 to broaden well-being initiatives for employees and their families across the organization.

We also strengthened recognition and engagement across the Company. A formal Recognition Programs Policy ensures that achievements are acknowledged consistently and transparently, with recognition integrated into town halls and internal communications. Our human-centered communication approach celebrates personal milestones such as promotions, certifications, weddings, and new family arrivals, while also providing compassionate support during challenging life events, including illness and bereavement. Through these efforts, we continue to foster a supportive workplace where people feel valued, connected, and motivated to thrive.

Our people strategy is centered on maintaining a healthy, engaged workforce by strengthening capabilities and ensuring fair, merit-based employment practices. Consistently low employee turnover, well below typical industry levels, reflects the strength of this approach. External recognition further affirmed our progress, including two Silver Employee Happiness Awards for Best Induction Program and Best Recruitment Strategy, highlighting the effectiveness of our recruitment, onboarding, and employee experience initiatives.

Looking Ahead

We will continue strengthening our Human Capital framework as a core driver of business performance and long-term value creation. Our focus is on building robust talent pipelines, developing leadership capability, enhancing well-being and recognition programs, and deepening Saudization across roles and functions. We will also advance the integration of digital HR platforms to support more responsive, data-driven people management across the organization.

In the coming period, we aim to shape a future-ready workforce through more advanced learning and development, strengthened succession planning and governance, and expanded career pathways for Saudi nationals. By sustaining a skilled, engaged workforce, we will continue to support our strategic priorities and contribute meaningfully to the ambitions of Saudi Vision 2030.

Driving Social Change continued

Our Communities

Supporting Health, Entrepreneurship, and Community Well-being

Creating shared value in the communities where we operate is a central part of our social responsibility. We focus on areas where we can make a meaningful and lasting contribution, particularly food quality and safety, nutrition and health, and broader community support. In 2025, these priorities remained key material topics, embedded into our marketing, engagement, and partnership activities to deliver measurable progress and strengthen long-term Stakeholder value.

Through initiatives aligned with Saudi Vision 2030, we concentrated on promoting health awareness, empowering local entrepreneurs, and supporting food security. Our role extends beyond providing essential food products. We actively contribute to community development by working alongside charitable organizations, foundations, and national entities to deliver initiatives that are practical, inclusive, and responsive to local needs.

Ensuring Excellence in Food Quality, Safety, and Nutrition

Our production processes follow globally recognized best practices, including Good Manufacturing Practices (GMP) and Hazard Analysis Critical Control Points (HACCP), reinforcing consumer confidence and ensuring consistent delivery of high-quality products.

Food Quality and Safety

We continued to strengthen our proactive quality assurance processes in 2025. Through systematic testing, supplier oversight, and process controls, we ensured compliance with regulatory standards and maintained strict internal benchmarks across all production facilities.

Quality Assurance in Numbers (across all plants)	2023	2024	2025
Total tests conducted	720,000	817,600	893,520
Daily tests			
Physical	400	420	598
Chemical	1,500	1,720	1,715
Microbiological	100	100	100

To uphold our commitment to excellence, we perform more than **2,000** quality tests daily across our operations, reinforcing food safety, consistency, and product integrity.

Nutrition and Health

We recognize the growing awareness around healthy eating and inclusive nutrition within our communities. In 2025, we continued to prioritize the development and promotion of whole wheat and gluten-free flour products to meet the evolving needs of consumers seeking healthier and specialized dietary options. These product lines support balanced eating habits while providing suitable alternatives for individuals with gluten intolerance.

We strengthened our nutrition awareness efforts through digital engagement initiatives, gluten-free awareness campaigns, and the development of practical gluten-free recipes designed to support safe and accessible meal preparation. Through our Alraha recipe content, we also provided everyday meal ideas aligned with balanced nutrition, helping families make informed and healthier choices.

In addition, we introduced chlorine-free cake mixes in 2025 as part of our commitment to cleaner ingredient profiles and responsible product innovation. By focusing on ingredient integrity, product transparency, and ongoing innovation, we aim to contribute to long-term community well-being and more sustainable dietary practices.

Community Support

We are committed to meaningful community engagement that empowers individuals, supports entrepreneurship, and strengthens food security. Our approach focuses on creating lasting value through initiatives that respond to real community needs while contributing to long-term social development.

In 2025, we concentrated on strengthening and expanding our existing programs rather than introducing entirely new ones. This approach enabled us to deepen impact, improve continuity, and ensure that our initiatives deliver measurable and sustainable outcomes for the communities we serve.

To ensure measurable outcomes, we track community programs using defined KPIs. Our primary KPI is the number of people reached, while the Saudi Bakery Initiative is monitored through graduate outcomes, with a targeted graduate rate of 90%.

The Saudi Bakery Initiative

The Saudi Bakery initiative remained a cornerstone of our community strategy in 2025. The program supports aspiring chefs and small bakers through practical training, capability development, and business readiness preparation, directly contributing to SME development and local employment in line with Vision 2030.

In 2025, the initiative delivered a 100% graduation outcome (20 graduates out of 20 trainees), exceeding the 90% target. By directing funding to a program aligned with national economic diversification and local content objectives, we ensured our community investments generated sustainable, long-term value.

Saudi Bakery in 2025

Driving Social Change continued

Partnerships and Community Outreach

Partnerships with local organizations played a key role in amplifying impact. Collaboration with the Celiac Foundation strengthened awareness and credibility of gluten-free initiatives, supporting inclusive nutrition and expanding outreach to individuals with specific dietary needs.

Throughout 2025, we also supported charitable organizations and community entities through product donations and targeted contributions across the Kingdom, including Al-Qassim, Jeddah, Makkah, Tabuk, and Al-Ahsa. These contributions aligned with national values of solidarity and social support, particularly during key periods such as Ramadan.

Community Contributions in 2025

Total flour products donated:

10,310 (10 kg packs)

Additional category contributions:

100 units

Total value of donations:

﷼ 73,070

In total, we invested approximately **﷼ 230,000** in 2025 to strengthen donations, partnerships, sponsorships, and community initiatives that enhance welfare and sustainable development.

Looking Ahead

We aim to expand the reach and impact of our community initiatives by building on established programs such as the Saudi Bakery Initiative and our gluten-free awareness efforts, extending them to support more trainees, small bakers, and local communities. We will place greater emphasis on education and capability building—particularly in entrepreneurship, nutrition, and inclusive food solutions—delivered in close collaboration with local organizations and charitable partners to maximize impact.

In the near term, we plan to expand the Saudi Bakery Initiative to Al-Qassim and Jeddah in 2026, with an ambition to scale nationwide within three to four years. Our priority is to place community empowerment, health awareness, and inclusive nutrition at the core of our social responsibility agenda. By aligning these efforts with Vision 2030, we aim to deliver meaningful, measurable contributions to national well-being and support resilient, thriving communities over the long term.
